IN ADULT TISSUES, EXPRESSED UBIQUITOUSLY IN THE BRAIN, DETECTABLE IN THE HEART, LIVER, SPLEER, THENGS, PROSTATE, TESTIS, OVARY, SMALL INTESTINE AND COLON. THE TYPE A ISOFORMS SEEM TO BE EXPRESSED PREDOMINANTLY IN FETAL BRAIN WHEREAS TYPE B ISOFORMS ARE EXPRESSED ABUNDANTLY IN
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 MEDLINE=99162404; PubMed=10051403; Matsumoto N., Pilz D.T., Ledbetter D.H.; Matsumoto N., Pilz D.T., Ledbetter D.H.; Matsumoto N., Pilz D.T., Ledbetter D.H.; Genomic structure, chromosomal mapping, and expression pattern of human DCAMKL1 (KLAA0369), a homologue of DCX (KLIS)."; Genomics 56:179-183(1999).

-! FUNCTION: PROBABLE KINASE THAT MAY BE INVOLVED IN A CALCIUM-SIGNALING PATHWAY CONTROLING BENEROWAL MIGRATION IN THE DEVELOPING BRAIN. MAY ALSO PARTICIPATE IN FUNCTIONS OF THE MATURE NERVOUS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          BOTH FETAL AND ADULT BRAIN.
SIMILARITY: Belongs to the Ser/Thr family of protein kinases. CaMK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ALTERNATIVE PRODUCTS:

Event=Alternative splicing; Named isoforms=4;

Comment=Additional isoforms seem to exist. Type A (AS and AL)
and type B (BS and BL) isoforms differ respectively by the
presence or absence of the doublecortin domain. An alternative
splicing occurring in 3' of the mRNA produces the long (L)
instead of the short (S) isoforms;
                                                                                                                                                                                                                                                                                  MEDLINE=99156863; PubMed=10036192; Sossey-Alaoui K., Srivastava A.K.; MEDAMKL1, a brain-specific transmembrane protein on 13q12.3 that is similar to doublecortin (DCX)."; Genomics 56:121-126(1999).

## ALIGNMENTS

N

```
(HK), that has homology to members of the calcium/calmodulin-dependent protein kinase kinase subfamily. The mechanism of action of the protein of the invention is that of a kinase modulator. The human kinase of the invention is useful for creating a pharmaceutical composition for treating a disease or condition mediated by the human kinase. HK is also useful to provide a target for diagnoshing a disease or predisposition to disease mediated by HK, and is also useful in pharmacogenic analysis. HK is useful for treating a disorder characterised by absence of anappropriate or unwanted expression of HK, also as an immunogen to raise antibodies by administering HK to a mammalian organism e.g. rat, rabbit or mouse. Nucleic acids of the invention are useful as hybridisation probes for mRNA, transcript/cDNA and genomic DNA. Recombinant host cells expressing a native HK are useful for assaying compounds that stimulate or inhibit HK function. Nucleic acids of the invention are also useful for present invention are assaying a native HK are useful for assaying compounds that stimulate or inhibit HK function. Nucleic acids of the invention are also useful for present invention are expressed in humans in the eye (retinoblastomas) and brain. The current sequence represents the amino acid sequence of the human kinase of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for diagnosing
                                                                 /note= "wild-type Glu is replaced by Gly as a result of
an SNP (single nucleotide polymorphism) in the encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      invention relates to an isolated peptide designated human kinase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     disease or predisposition to the disease mediated by the peptide
                                                                                                                                                                                                                                                                               cGMP-dependant protein kinase

The present invention relates to an isolated human kinase polypeptide

(PKIN) or a biologically active/immunogenic fragment of PKIN. PKIN is

useful for diagnosing, treating and preventing cancer (e.g., leukaemia,
lymphoma, melannoma), an immune disorder (e.g., acquired immunodeficiency
syndrome (AIDS), Addison's disease, allergy, anaemia, asthma, Crohn's

disease, rheumatoid arthritis), a growth and developmental disorder (e.g.
bursitis, cirrhosis, hepatitis, psoriasis, Cushing's syndrome), a

cardiovascular disorder (e.g., atherosclerosis, hypertension, myocardial

infarction), and a lipid disorder (e.g., fatty liver, cholestasis,

daucher's disease, Niemann-Pick's disease). PKIN is useful in a number of

drug screening techniques and to analyse the protecome of a tissue or cell

type. PKIN is useful for creating knockin humanised animals or transgenic

animals to model human diseases, in somatic or germline gene therapy, to

generate a transcript image of a tissue or cell type, for detecting

differences in the chromosomal location due to translocation, inversion,

cycle and apping naturally occurring genomic sequences. PKIN is useful

to probes for mapping naturally occurring genomic sequences. PKIN is useful

conthern or northern analysis, dot blot or other membrane-based

technologies, in PCR technologies, in dipstick, pin, multiformat enzyme

linked immunosorbent (ELISA)-like assays and in microarrays utilising

fluids or tissues from patients to detect altered PKIN expression. The

crimination of the mucleic acid sequence. Also claimed are a vector comprising the movel polynucleotide, a host cell derivative or allelic variation of the mucleic acid sequence. Also claimed are a vector comprising the movel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a sequence that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that medulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (CMI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of 361 LHRKIKNEPVVFPEEPEISEELKDLILKMLDKNPETRIGVPDIKLHPWVTKNGEEPLPSE 420 The invention discloses a composition comprising two or more isolated rat for EEHCSVVEVTEGEVKNSVRLIPSWTTVILVKSMLRKRSFGNPFEPQARREERSMSAPGNL New composition comprising two or more isolated polypeptides, useful preparing a medicament for treating pain in an animal. The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising ne nucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a agent to perform the method, an array, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the polynpetides are method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more of the cativity in an animal of one or more of the polypeptides given in the activity in an animal of one or more of the polypeptides or their antibodies. The polypucleotide or more complained by a pecification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more complained by a specification) which is differentially expressed during pain. Note: the specialication) which is differentially expressed during pain. Note: the specialication but was obtained in electronic form directly from WIPO at the polymous or the compound or the compound or the compound or the compound or the compound or the compound or the compound or the compound or the compound or the compound or the compound or the compound or the sequence data for this patent did not form part of the printed or the compound or the compound or the compound or the compound or the compound or the com
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an isolated polymucleotide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ1119-ABZ1066) or their mature procein coding portion, active domain coding protein or complementary sequences. The polymucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABE68902-ABP69849) are useful as molecular weight maging, screening and diagnostic assays and for treating cellimaging, screening and diagnostic assays and for treating cellimaging, screening and diagnostic assays and for treating cellimaging, screening and diagnostic assays in medical correctly for alzheimer's diseases (multiple sclerosis, or Alzheimer's diseases (multiple sclerosis, diabetes, lupus) genetic disorders, wound, burns, incision, ulcers, liver platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                               Human; genome mapping; gene therapy; food supplement; virus; fungus; cell-proliferative disorder; neurodegenerative disease; bacterial; barkinson's disease; Alzheimer's disease; autoimmune disease; multiple sclerosis; diabetes; genetic disorder; wound; burn; infection; arthritis; cytostatic; immunoadulator; nootropic; neuroprotective; antiparkinsonian; antidiabetic; immunosuppressive; dermatological; haemostatic; vulnerary; fungicide; antibacterial; virucide; protozoacide;

cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or reating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial asthma. The products of the invention can be used for gene therapy or in a vaccine. ABU65041-ABU65218 represent the NOVX polypeptides encoded by

ANU03501-AAU03557 represent novel human protein kinases #1-57. The novel protein kinases have been identified as members of the tyrosine or serine/threonine kinase (PTK and STK) families. The polymolleotides encoding protein kinase and the polymoptides may be used in the prevention, diagnosis and treatment of disease associated with inappropriate kinase expression. For example, they may be used to treat cancers (especially cancers of haematopoietic origin), cardiovascular disease (e.g. atherosclerosis), metabolic disorders (e.g. disorders (e.g. disorders (e.g. disorders), inflammatory disorders (e.g. disorders), and reproductive disorders (e.g. disorders), and reproductive disorders (e.g. infertility).

Additionally, polymorleotides encoding protein kinases may be used for gene therapy and as DNA probes in diagnostic assays. The protein kinase polymeptides may be used as antigens in the production of antibodies cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               LLPARPSLSARKLSLQERPAGSYLEAQAGPYATGPASHISPRAWRRPTIESHHVAISDAE 120

```
The invention relates to novel human kinase proteins (PKIN) and nucleic acid molecules encoding them. PKIN is useful for identifying compounds that modulates its activity. PKIN cDNA is useful for assessing toxicity of a test compound. PKIN and its CDNA are useful for diagnosis, prevention and treatment of immune disorders such as acquired immune deficiency syndrome (AIDS), Addison's disease, anaemia, adult respiratory deficiency syndrome (AIDS), Addison's disease, anaemia, autoimmune had an advantagis, sportasis, autoimmune had an advantagis, autoimmune thyroiditis, multiple sclerosis, asthma, osteoarthritis, osteoporosis, rheumatoid arthritis, ulcerative colitis and diabetes mellitus; growth and developmental disorders such as actinic
                                                                                                                                                                                                                                                                                                                                                      keracosis, arteriosclerosis, atherosclerosis, bursitis, cirrhosis, hepatitis, mixed connective tissue disease (MCTD), and myelofibrosis; cancers such as adenocarcinoma and leukaemia, cardiovascular diseases such as myocardial infarction and hypertension; and lipid disorders such as fatty liver and cholestasis. PKIN cDNA is useful to detect upstream sequences such as prometers and regulatory elements, for creating knock in or knock out in humanised animals or transgenic animals to model human disease and for somatic or germline gene therapy for treating the above
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  mentioned disorders. The present sequence is human kinase (PKIN)-2

AAU79458 standard; protein; 561 AA. 15-JUL-2002 (first entry) Human novel kinase 16002. AAU79458; RESULT 9 AAU79458 EXHX SX

New human transferase protein for diagnosing and treating disorders e.g. cancer, Alzheimer's disease, anorexia, diabetes and to identify numani, tumour, adenocatione, heematopoietic neoplastic disorder; carcinoma; tumour, adenocatione, heematopoietic neoplastic disorder; leukaemia; lymphoma; brain disorder; cerebral ischaemia; infection; meningitis; brain absess; acquire immunodeficiency syndrome; obesity; AIDS-related myopathy; prion disease; Alzheimer's disease; diabetes; Parkinson's disease; Muntington's disease; motor neurone disease; parkinsolic disorder; anorexia nervosa; pain; inflammation; ischaemia; irritable bowel syndrome; hart disorder; myocardial infarction; blood vessel disorder; atherosclerosis; bone metabolism disorder; cancer; enzyme, 16002; kinase; cellular proliferative disorder; osteoporosis; haematopoietic disorder; arthritis. modulators for therapeutic use. Meyers RA, Silos-Santiago I; 03-AUG-2001; 2001WO-US024601. 01-SEP-2000; 2000US-0229299P. (MILL-) MILLENNIUM PHARM INC. WPI; 2002-351781/38. N-PSDB; ABK49563. WO200220800-A2 Homo sapiens 14-MAR-2002. 

The invention relates to an isolated human kinase polypeptide encoded by the DNAs designated 16658, 14223 and 16002 included are a host cell comprising the DnAs designated 16658, 14223 and 16002 included are a host cell composed are a not compared that a compand are a host cell compressing the protein, detecting the presence of the DNA in a sample comprising the protein detecting the presence of the DNA in a sample comprising contacting the sample with a compound which selectively hybridises to the DNA and determining whether the compound has bound and determining whether the compound has bound to and/or modulate the protein comprising contacting the protein with a test compound and determining whether the compound has bound to and/or modulated the function of the protein (the modulacrs may be a small molecule, a peptide, a comprising contacting the protein with a test compound and determining whether the compound has bound to and/or modulators and antibodies are useful in the diagnosis, monitoring and treatment of and antibodies are phosphopeptide, an antibody or a fragment of the full length protein). The nucleic acids, proteins, identified modulators and antibodies are useful in the diagnosis, monitoring and treatment of a wide range of diseases and disorders (may examples of which are listed in the specification) including cellular proliferative disorders (e.g. carebral ischaemia, infections such as mand nerve tissue disorders (e.g. cerebral ischaemia, infections such as the meningitis, brain abscress, acquired immunodeficiency syndrome (AlDS)-crelated myopathy, prion diseases, Allahamer's disease, metabolic crelated myopathy, prion diseases, and motor neurone disease, metabolic crelated myopathy, prion diseases and motor neurone disease, metabolic crelated with infection, inflammation ischaemia, irritable bowel creareoporosis) and haemacopoletic disorders of bone metabolism (e.g. arsociated with infection, inflammation ischaemia, irritable bowel creapenporosis) and haemacopoletic disorders of bone metaboli

This invention describes novel human NOVX polypeptides which have cytostatic, cardiant, antiarteriosclerotic, antiasthmatic and hypotensive activity. Pharmaceutical compositions comprising the NOVX proteins or nucleic acid molecules or NOVX antibodies are useful for preventing or treating a disorder associated with aberrant NOVX expression or activity e.g. cancer, hypertension, atherosclerosis, cardiomyopathy or bronchial

The invention relates to an isolated peptide designated human kinase

(HK), that has homology to members of the calcium/calmodulin-dependent
protein kinase kinase subfamily. The mechanism of action of the protein
of the invention is that of a kinase modulator. The human kinase of the
creating a disease or condition mediated by the human kinase. HK is also
useful to provide a target for diagnosing a disease or predisposition to
disease mediated by HK, and is also useful in pharmacogenic analysis. HK
is useful for treating a diseorder characterised by absence of
clisease mediated by HK, and is also useful in pharmacogenic analysis. HK
is useful for treating HK to a mammalian organism e.g. rat. rabbit
or mouse. Nucleic acide of the invention are useful as hybridisation
probes for mRNA, transcript/cDNA and genomic DNA. Recombinant host cells
expressing a native HK are useful for assaying compounds that stimulate
or inhibit HK function. Nucleic acide of the invention are also useful
for producing transgenic animals. Experimental data indicates that kinase
proteins of the present invention are expressed in humans in the eye
creating sequence related to to kinase protein of the invention, appearing as
caid sequence related to to kinase protein of the invention, appearing as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            61 LLPARPSLSARKLSLQERPAGSYLEAQAGPYATGPASHISPRAWRRPTIESHHVAISDAE 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        VPCDKPFSEEQARLYLRDVILGLEYLHCQKIVHRDIKPSNLLLGDDGHVKIADFGVSNQF 300

The invention discloses a composition comprising two or more isolated rate or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector; a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a ckit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a compound that regulates the activity of one or more of the compound for identifying a compound or small molecule that regulates the cctavity in an animal of one or more of the cativity in an animal of one or more of the cativity in an animal of one or more of the cativity in an animal of one or more of the cativity in an animal of one or more of the cativity in an animal of one or more of the cativity in an animal of one or more of the cativity in an animal of one or more of the cativity in an animal of one or more of the polynetides given in the specification, a method for identifying a compound useful in treating

ö
pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polymuclectide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              300

```
CDNA obtained from Instructure close 640521 of BRSTNOTO3 library. It is expressed in reproductive, nervous and developmental tissues and is found to be homologous to Ca2+fcalmodulin-dependent protein kinase kinase. Fragments of CSIGP encoding nucleic acid can be used as hybridisation probe for detecting CSIGP related sequences or allelic variants. Recombinant CSIGP can be produced in host cells by transforming them with probe for detecting CSIGP related sequences or allelic variants. Recombinant CSIGP can be produced in host cells by transforming them with the treatment of cell proliferative and inflammatory disorders associated with decreased or increased CSIGP expression. CSIGP is used in the diagnosis, prevention and treatment of cell proliferative disorders associated diagnosis, prevention and treatment of cell proliferative disorders like arteriosclerosis, cirrhosis, cancer, hepatitis and inflammatory disorders like AIDS, Addison's disease, multiple sclerosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   115
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      138
